

Vinit Shetty

REPORTING & BI ANALYST | ERP · SUPPLY CHAIN · OPERATIONS ANALYTICS

Melbourne, VIC · +61 480 485 021 · vinitshetty31@gmail.com · linkedin.com/in/vinitshetty · github.com/vinitshetty16

PROFESSIONAL SUMMARY

Reporting & BI Analyst with 4 years of experience across automotive, manufacturing, and FMCG industries. At Thirdware Solutions, developed SQL-based reporting models, ERP datasets, and Power BI dashboards as part of consulting teams on projects involving Tesla, GM, Ford, and Toyota. Currently responsible for KPI reporting and data consolidation across 2 business units at GWMI Group, standardising operational reporting for finance and supply chain leadership. Microsoft PL-300 certified with a Master of Applied Artificial Intelligence from Deakin University.

KEY SKILLS

Technical: SQL, Python, DAX, ETL, PostgreSQL, Data Modelling, Snowflake, Azure

Tools & Platforms: Power BI, Power BI Service, Azure Data Studio, ERP Systems, Git, Jira, Excel

Domain: Supply Chain Analytics, ERP Reporting, Inventory Management, Procurement Analytics, KPI Reporting, Financial Reporting

PROFESSIONAL EXPERIENCE

Data Reporting Analyst | GWMI, Geelong VIC | June 2023 - Present

- Built and maintained operational KPI reports in Excel, powered by MySQL queries extracting data from internal databases and client portals, serving finance and operations teams.
- Developed structured MySQL queries to consolidate client portal data into Excel reporting templates, used by senior management across finance and operations for weekly performance tracking.
- Improved data accuracy by 20% by unifying data across multiple sources into a single master dataset, eliminating manual reconciliation errors across business units.
- Responsible for all ad-hoc analytical requests from senior management, consistently delivering insights within a 24-hour turnaround.

ERP Data Analyst | Thirdware Solutions, Mumbai, India | July 2019 - July 2021

- Developed Power BI dashboards and automated SQL scripts to extract and transform ERP data across production, procurement, and inventory operations for enterprise automotive and manufacturing clients.
- Built new ERP reporting datasets and enhanced existing reporting models supporting end-to-end analytics across 15+ client engagements, including projects involving Tesla, GM, Ford, and Toyota.
- Presented dashboard demonstrations and analytical findings directly to client stakeholders across manufacturing and FMCG operations, translating complex ERP data into actionable operational insights.
- Contributed to KPI definition and reporting framework discussions with client operations teams across automotive and FMCG accounts.

ERP Software Engineer | Thirdware Solutions, Mumbai, India | July 2018 - July 2019

- Configured, customised, and maintained ERP inventory and EDI modules for 3-4 enterprise automotive and manufacturing clients, supporting procurement and supply chain workflows across development, testing, UAT, and production environments.
- Developed SQL scripts to extract and transform ERP inventory and EDI data, enabling accurate operational reporting across client procurement and supply chain functions.
- Gathered requirements from business users and functional consultants, implemented ERP configuration changes, and validated system behaviour against client operational needs.

EDUCATION

Master of Applied Artificial Intelligence | Deakin University, Australia | 2021 - 2024

Bachelor of Engineering | University of Mumbai, India

PROJECTS

Supply Chain Performance Analytics | PostgreSQL, Python, Power BI, SQL

- Ingested 180,000+ supply chain transactional records into PostgreSQL, designing a star schema across fact and dimension tables covering orders, customers, products, shipping, and locations.
- Resolved data quality issues, including inconsistent delivery timestamps, null order zipcodes across 86% of records, and encoding errors during ingestion, before building SQL reporting views.
- Developed SQL reporting views analysing on-time delivery rates, shipping mode performance, and regional delay patterns across 5 global markets and 40+ product categories.
- Identified that 54% of orders were late with Standard Class shipping, and specific regional markets were driving most delays, surfaced through a Power BI dashboard published to Power BI Service.

ERP Operations & Procurement Reporting | PostgreSQL, Power BI, DAX, Excel

- Designed a star schema based on ERP-style reporting structures covering procurement, inventory, and order fulfilment data across 3 years of transactional history.
- Developed SQL views tracking 12 operational KPIs, including inventory turnover, purchase order cycle times, and order fulfilment rates across manufacturing and FMCG operations.
- Built a multi-page Power BI report with DAX measures for procurement efficiency and inventory health, with drill-through capability by department and product category.
- Replaced a manual Excel-based monthly reporting process, reducing reporting preparation from 3 days to near real-time delivery for finance and operations leadership.
